

Buckeye Flood Retarding Structure No.1

PUBLIC MEETING

October 4, 2007

Questionnaire

Name: _____

Address: _____

Phone Number: _____ Email: _____

In addition to providing flood protection, the project is being designed to:

- Provide a wildlife corridor from the White Tank Mountains to the Hassayampa River. The current wildlife corridor concept is being developed using the White Tanks mule deer herd as an umbrella species.
- Provide passive recreation including a segment of the Maricopa Trail, wildlife viewing areas, environmental education and interpretive areas, and the potential to integrate a Town of Buckeye Region Park.
- Preserve the existing wash corridors and native vegetation.
- Create a gateway feature for the Town of Buckeye and the Phoenix Metropolitan area along the I-10 view shed.

1. What do you like most about this concept?

2. What would you like to see done to improve this concept? (i.e.- other recreation opportunities, design themes, etc.)
