

## Firefox Quantum (Firefox 57.0.4 and later)

To set Firefox Quantum to use Adobe Reader to read PDFs, follow the steps given below. Before you start, be sure that you have Adobe Reader installed on your computer or mobile device. **Note that Firefox Quantum looks and navigates differently than earlier versions.**

In the upper right corner of your browser window, click on the three bars. A drop-down menu then appears. In that menu, select the gear icon for “Options”.

Scroll down through the Options section until you get to “Applications”. Click on “Portable Document Format (PDF)”.

To the right of “Portable Document Format (PDF)”, there is a drop-down list that shows “Preview in Firefox”. Click the arrow to show all of the options in the drop-down list. Select “Use Adobe Acrobat Reader 2017 (default)”. That’s it—you are done.
