

Idle Free Announcement

We need your help to protect student health! Did you know that vehicle idling for just one minute produces as much carbon monoxide as smoking three packs of cigarettes? Gross! Vehicle idling occurs when a vehicle's engine is on, but the vehicle is not moving. While idling, a vehicle is burning fuel and creating air pollution even though it is going nowhere! Please encourage drivers to turn off their vehicle engines while waiting in line during student arrival and dismissal times to protect our health!
